

Second Listen

*Talk through what changed.
Leave with evidence and the next action.*

Voice agent for post-investment review

The sentence no dashboard captures

“The CFO left last week.”

A KPI report can show runway. It cannot preserve the moment an investor hears who left, what changed, or what still needs an answer.

By quarter-end, the quote and the promised follow-up have usually disappeared into memory.

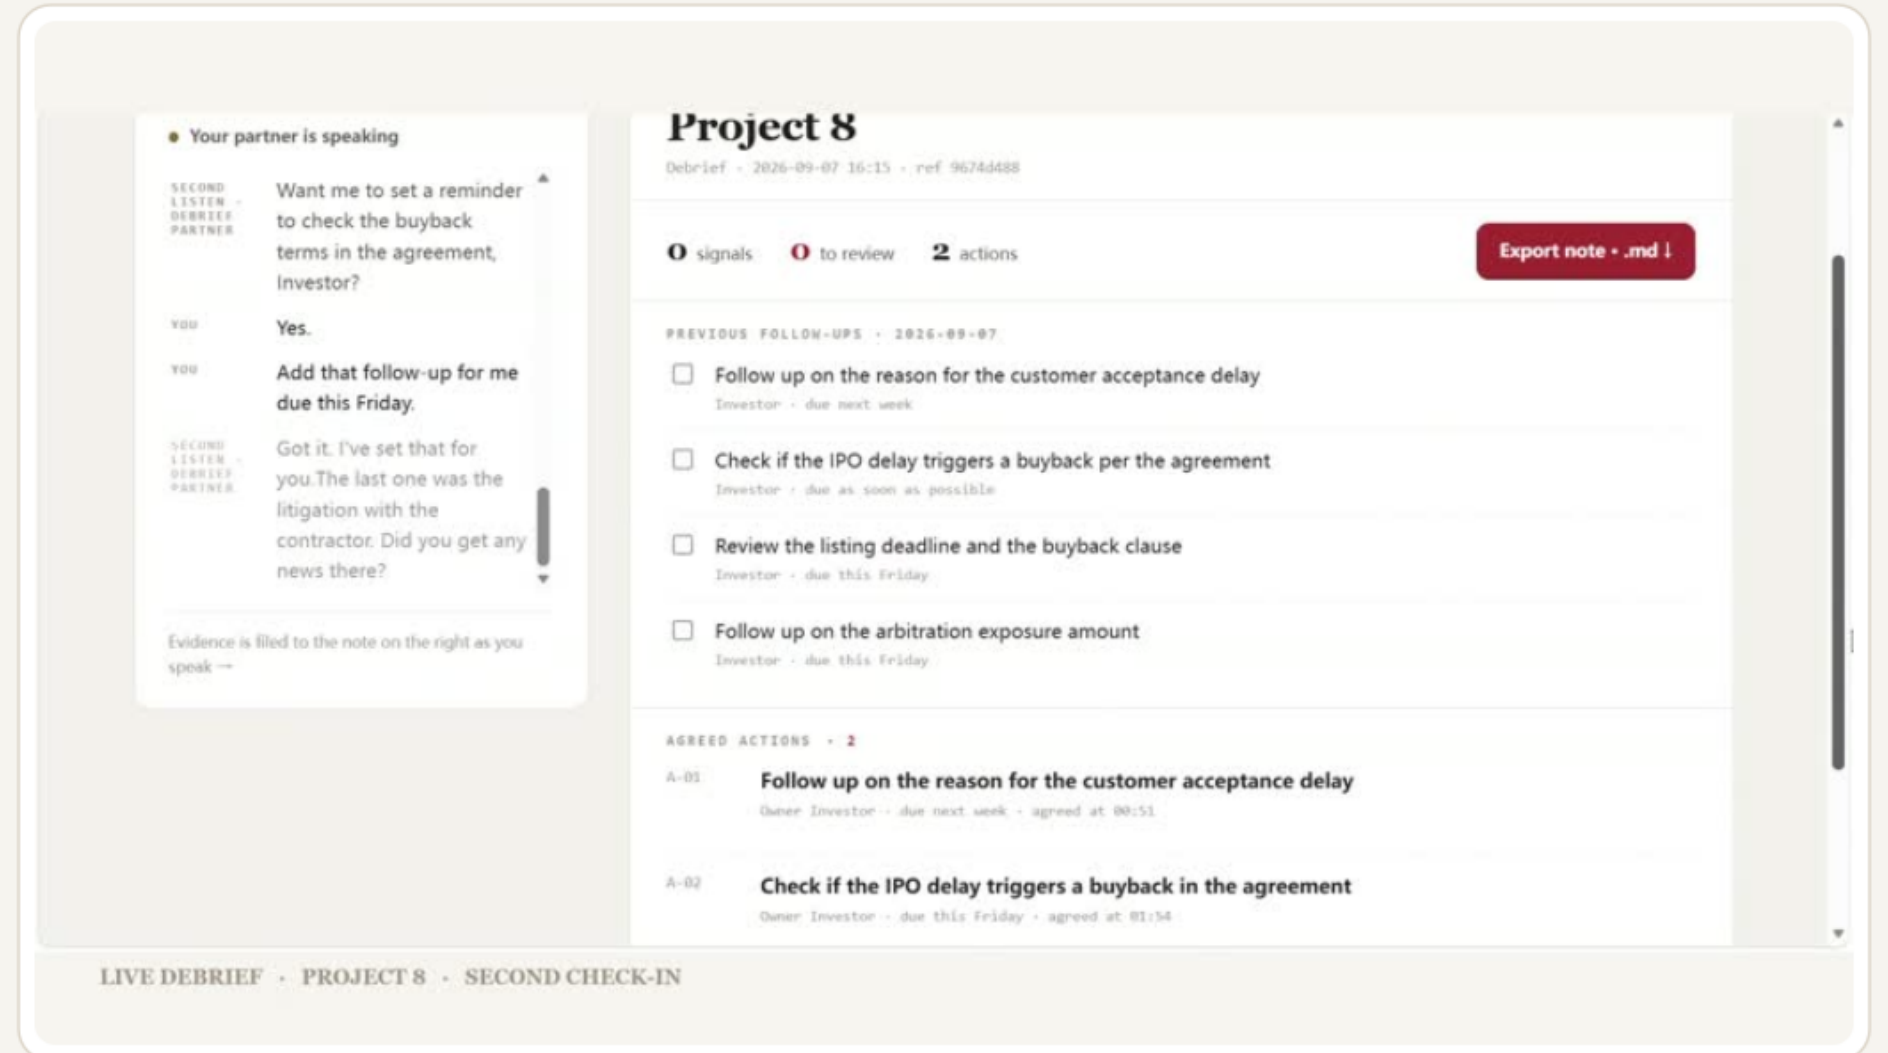

A short debrief becomes an operating record

1 Speak naturally after the call

2 Answer one focused question at a time

3 Leave with quote-backed evidence and agreed actions

Each action keeps its owner, deadline, and the moment it was agreed.

Recorded live-mode run using fictional Project 8

The follow-up a summary would miss

INVESTOR

“The CFO left last week.”

SECOND LISTEN

“Who covers finance now?”

WHAT GETS FILED

Source quote kept

Review flag raised

Follow-up gets an owner and due date

Last week's actions reopen first

Second Listen.

Post-investment notes with evidence — voice in, quotes kept.

Watch a sample ↗

Evidence is filed to the note on the right as you speak →

Prior follow-ups, reopened

SECOND LISTEN — POST-INVESTMENT VISIT NOTES

POST-INVESTMENT VISIT NOTES

Ready for the next check-in.

Start a debrief or upload a recording. Evidence, review flags and agreed follow-ups will be filed here.

PREVIOUS FOLLOW-UPS · 2026-09-07

☐ Follow up on the reason for the customer acceptance delay

Investor · due next week

☐ Check if the IPO delay triggers a buyback per the agreement

Investor · due as soon as possible

☐ Review the listing deadline and the buyback clause

Investor · due this Friday

☐ Follow up on the arbitration exposure amount

Investor · due this Friday

Debrief or recording

LIVE DEBRIEF · PROJECT 8 · SECOND CHECK-IN

The next check-in starts with unfinished work

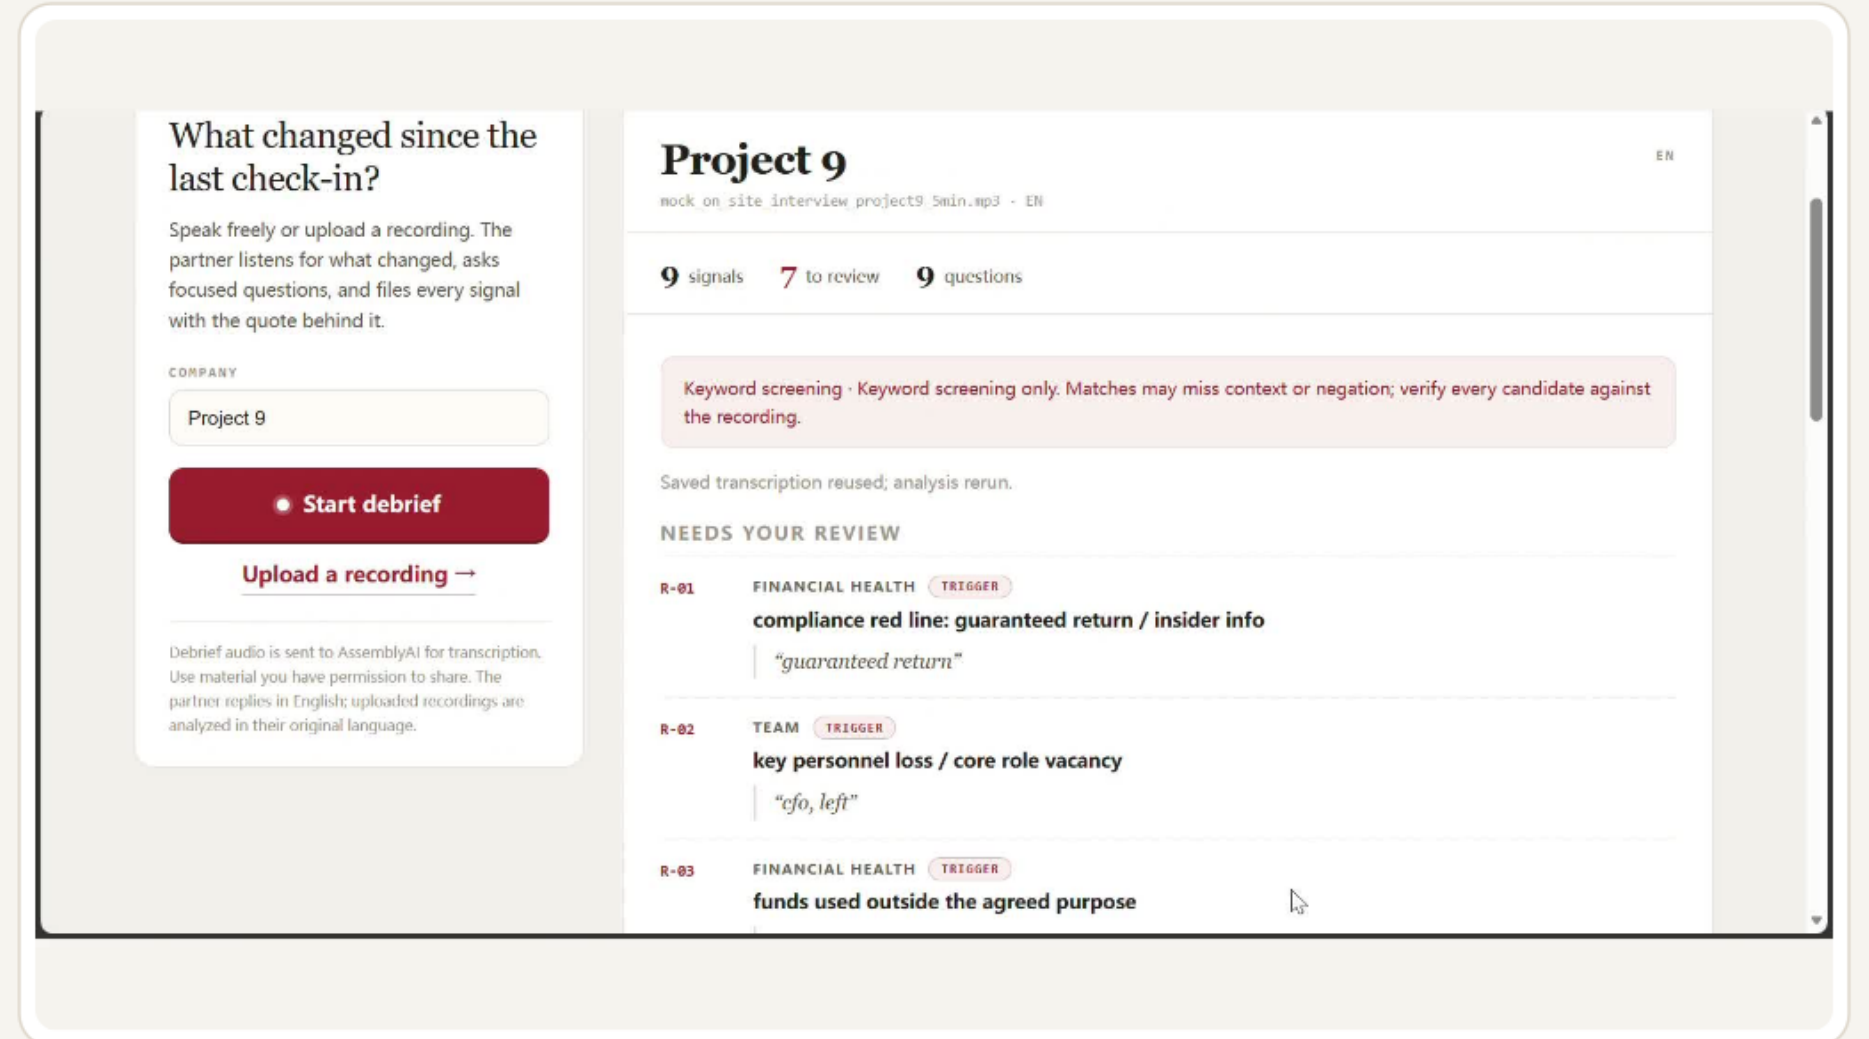

The agent asks about each open action before moving to new topics. The investor does not need to reconstruct the last call from memory.

Fictional Project 8

Already have a call recording?

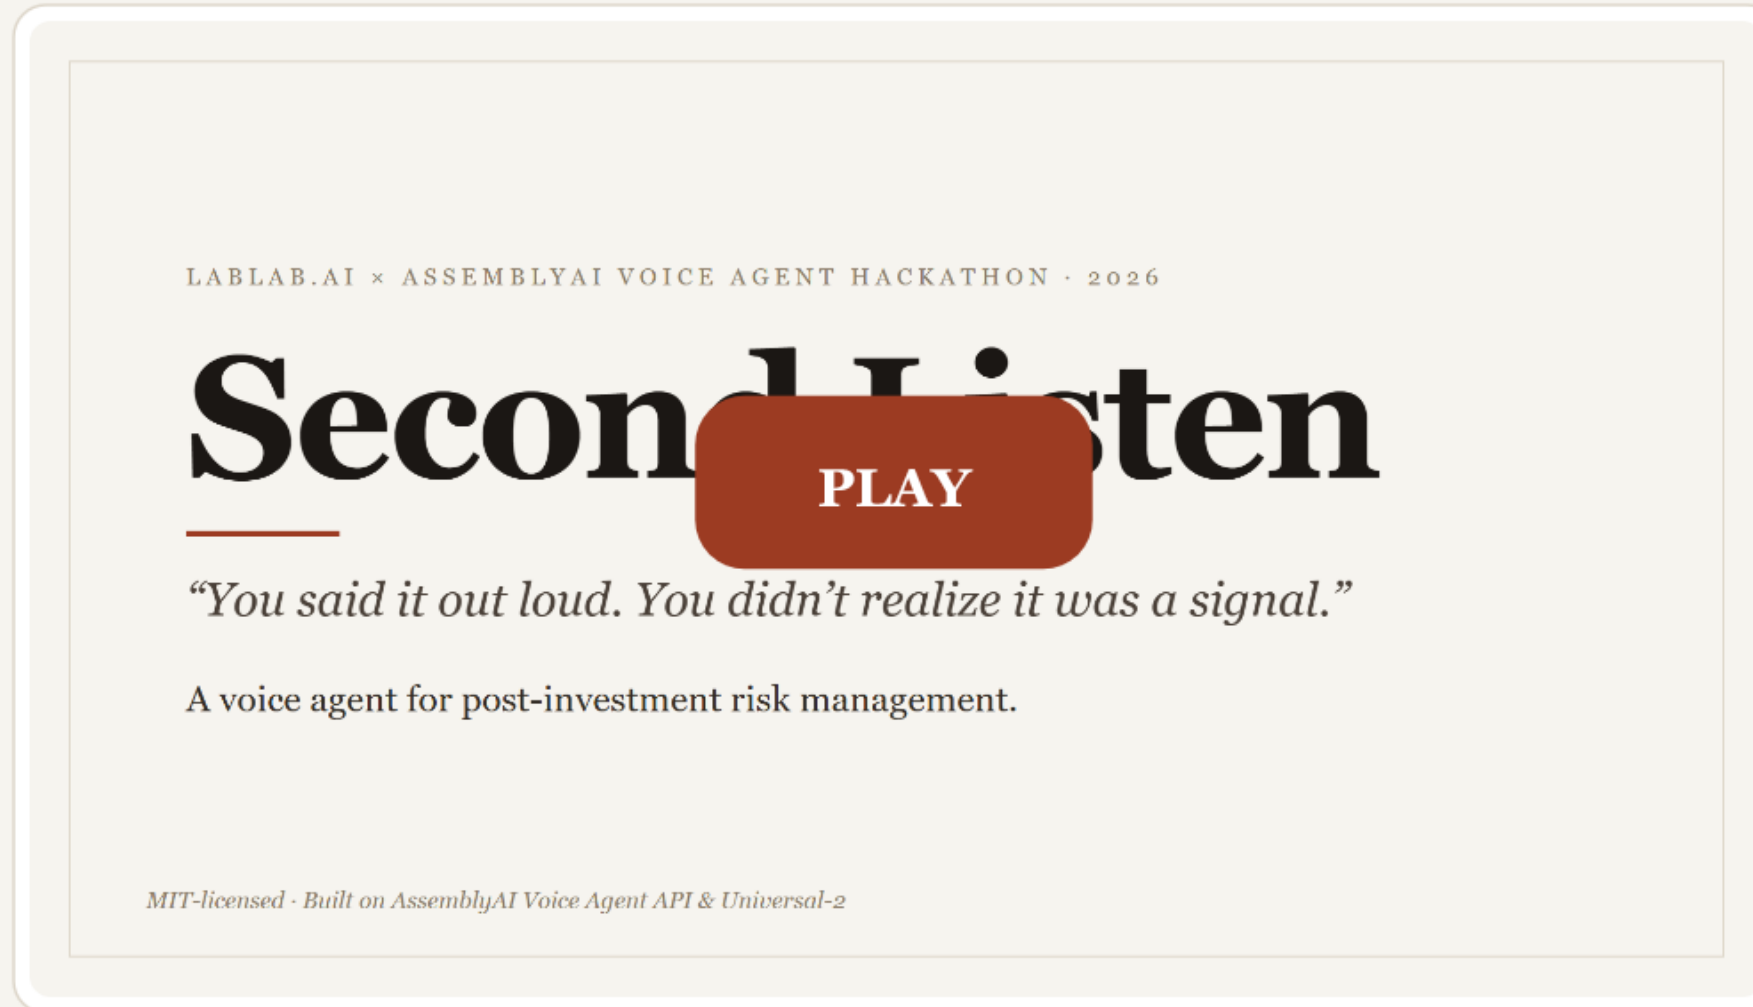

Upload it. Universal-2 transcribes multilingual audio, including Chinese. The same playbook returns candidate signals, review flags, and open questions.

The built-in fallback still surfaces candidates for human review when no compatible LLM is configured.

Fictional Project 9 recording

Watch the 3:44 product run

A recorded live-mode run

Project 8 and Project 9 are fictional. One quiet section was removed for length. The live segments otherwise run at their recorded pace.

youtu.be/51TKhR5Vg48

Two AssemblyAI paths, one evidence method

LIVE DEBRIEF

AssemblyAI Voice Agent API

One WebSocket handles speech recognition, agent reasoning, voice output, turn detection, interruption handling, and JSON-schema tool calls.

RECORDING ANALYSIS

Universal-2 plus a pluggable LLM

Universal-2 provides broad multilingual transcription. A configured OpenAI-compatible LLM applies the same evidence framework to the transcript.

Built for the team that owns post-investment risk

BUYER

Fund post-investment and risk teams

They already have a risk process on paper. Conversations still have no direct path into it.

DIFFERENTIATOR

A domain playbook that knows what to ask

Every surfaced signal keeps the quote behind it. The final judgment stays with an authorized human.

TRY IT

Your first fictional check-in

- 1** Open the live demo and enter Project 10
- 2** Say: “The CFO left last week. I do not know who covers finance.”
- 3** Watch what the agent asks next
